

Media Coverage & Brand Intelligence Report

Brand: Tesla | Data Source: NewsAPI | Analysis Period:
Recent Coverage Window

Prepared by: Shivanshu Nigam

Why Media Intelligence Requires Structured Analysis

Objective Measurement

Structured coding enables consistent classification of coverage volume, sentiment, and topic distribution.

Trend Identification

Systematic analysis reveals patterns in media attention and narrative shifts over time.

Risk Detection

Monitoring coverage volatility and sentiment changes helps identify potential reputation risks early.

Executive Summary

Coverage Stability

Volume remained consistent with no major spikes, indicating absence of crisis-driven attention or breaking news events.

Topic Distribution

Technology narratives dominated coverage, followed by finance-related discussions reinforcing innovation-centric perception.

Sentiment Shift

Gradual movement toward neutral coverage with declining negative sentiment and modest reduction in positive framing.

Brand Visibility

Most articles referenced Tesla as secondary mention, suggesting steady visibility within broader industry contexts.

Daily Media Coverage Volume

Key Insight

Coverage remained consistent throughout the period, with daily article counts fluctuating within a narrow range (47-50 articles).

No sharp spikes suggest stable media attention with no major events during this timeframe.

Media Coverage by Topic

Technology: 45 articles

Dominant topic accounting for majority of coverage

Finance: 19 articles

Market performance and investor discussions

Product: 8 articles

Limited product-focused coverage

Policy: 1 article

Minimal regulatory developments

Overall Sentiment Distribution

Neutral
Factual reporting

Positive
Favorable framing

Negative
Critical coverage

Neutral sentiment dominated, reflecting predominantly informational reporting with positive sentiment outweighing negative.

Sentiment Trend Over Time

Negative Declined

From 16 to 10 articles, indicating less critical coverage

Neutral Increased

From 16 to 24 articles, shift toward factual reporting

Positive Decreased

From 18 to 13 articles, reduced favorable framing

Top Media Sources

❏ **Key Finding:** Coverage was distributed across multiple publishers with no single outlet dominating. The Times of India led with ~8 articles, followed by Electrek and Yahoo Entertainment. This dispersion suggests broad but moderate media attention.

Brand Mention Analysis

77%

Secondary Mentions

Tesla referenced within
broader industry or market
discussions

Tesla frequently appeared in wider contexts rather than being the sole coverage focus, indicating steady brand visibility across industry narratives.

23%

Primary Focus

Articles with Tesla as main
subject

Key Analytical Takeaways

Stable Coverage Pattern

Media coverage remained stable with no volatility-driven risk indicators or sudden attention shifts during the analysis period.

Technology Narrative Dominance

Technology topics dominated coverage, reinforcing an innovation-centric media perception of the brand.

Sentiment Normalization

Neutral sentiment increased over time, indicating shift toward factual and informational reporting with reduced critical framing.

Distributed Publisher Landscape

Coverage spread across multiple publishers reduces concentration risk and indicates broad industry relevance.

Strategic Observations & Recommendations

Monitor Technology Narratives

Track technology-focused coverage for early indicators of product or innovation-related narrative shifts.

Track Finance Coverage

Monitor finance-related discussions closely during earnings announcements or major market movements.

Increase Primary Mentions

Implement proactive media engagement strategies to drive higher share of primary brand mentions in coverage.

Data Quality, Limitations & Closing Notes

Methodology

- Articles collected via NewsAPI
- Rule-based classification framework
- URL-level deduplication applied
- Timestamp normalization to UTC
- Coding consistency checks performed

Known Limitations

- Analysis based on limited time window
- English-language articles only
- Rule-based coding may classify nuanced topics under "Other"
- Secondary mentions may underrepresent brand prominence

❏ This report provides structured analysis of recent media coverage. Results should be interpreted within the context of the specified time window and data collection parameters
